Resophonic Guitar

Features

This humbucker pickup for Resophonic Guitars has great overall balance and clarity. Incorporates all of the best qualities of an extremely warm sounding humbucker, while still being microphonic enough to amplify the nuances of the actual resonator vibrations. This dual-coil humbucker pickup features an extreme low profile (6.4mm tall) for all resonator applications.

Mounting

Designed to be affixed to the top of a guitar at the end of the fretboard. Comes with double sided stick tape in two thickness and additional with two flanges (1mm & 2mm fat) for adjusting the distance from the strings.

This mounting technique requires no modification to your instrument.

Route the wire outside of the guitar to the 1/4" female Endpin jack in the desired location.
